Florida Natural Areas Inventory

Managed Area Element Summary

Okaloacoochee Slough State Forest

SCIENTIFIC NAME	COMMON NAME	Global rank	State rank	Federal status	State status
-----------------	-------------	-------------	------------	----------------	--------------

Using a ranking system developed by The Nature Conservancy and the Natural Heritage Program Network, the Florida Natural Areas Inventory assigns two ranks for each element. The global element rank is based on an element's worldwide status; the state element rank is based on the status of the element in Florida. Element ranks are based on many factors, the most important ones being estimated number of Element Occurrences (EOs), estimated abundance (number of individuals for species; area for natural communities), geographic range, estimated number of adequately protected EOs, relative threat of destruction, and ecological fragility.

FNAI GLOBAL ELEMENT RANK

- G1 = Critically imperiled globally because of extreme rarity (5 or fewer occurrences or less than 1000 individuals) or because of extreme vulnerability to extinction due to some natural or man-made factor.
- G2 = Imperiled globally because of rarity (6 to 20 occurrences or less than 3000 individuals) or because of vulnerability to extinction due to some natural or man-made factor.
- G3 = Either very rare and local throughout its range (21-100 occurrences or less than 10,000 individuals) or found locally in a restricted range or vulnerable to extinction from other factors.
- G4 = Apparently secure globally (may be rare in parts of range).
- G5 = Demonstrably secure globally.
- G#? = Tentative rank (e.g., G2?)
- G#G# = Range of rank; insufficient data to assign specific global rank (e.g., G2G3)
- G#T# = Rank of a taxonomic subgroup such as a subspecies or variety; the G portion of the rank refers to the entire species and the T portion refers to the specific subgroup; numbers have same definition as above (e.g., G3T1)
- G#Q = Rank of questionable species - ranked as species but questionable whether it is species or subspecies; numbers have same definition as above (e.g., G2Q)
- G#T#Q = Same as above, but validity as subspecies or variety is questioned.
- GH = Of historical occurrence throughout its range, may be rediscovered (e.g., ivory-billed woodpecker)
- GNA = Ranking is not applicable because element is not a suitable target for conservation (e.g. as for hybrid species)
- GNR = Not yet ranked (temporary)
- GNRTNR = Neither the full species nor the taxonomic subgroup has yet been ranked (temporary)
- GX = Believed to be extinct throughout range
- GXC = Extirpated from the wild but still known from captivity/cultivation
- GU = Unrankable. Due to lack of information, no rank or range can be assigned (e.g., GUT2).

FNAI STATE ELEMENT RANK

Definition parallels global element rank: substitute "S" for "G", and "in Florida" for "globally" in above global rank definitions.

FEDERAL LEGAL STATUS (U. S. Fish and Wildlife Service- USFWS)

Provided by FNAI for information only. For official definitions and lists of protected species, consult the relevant federal agency. Definitions derived from U.S. Endangered Species Act of 1973, Sec. 3. Note that the federal status given by FNAI refers only to Florida populations and that federal status may differ elsewhere.

- LE = Listed as Endangered Species in the List of Endangered and Threatened Wildlife and Plants under the provisions of the Endangered Species Act. Defined as any species which is in danger of extinction throughout all or a significant portion of its range.
- LE,XN = A non-essential experimental population of a species otherwise Listed as an Endangered Species.
- PE = Proposed for addition to the List of Endangered and Threatened Wildlife and Plants as Endangered Species.
- LT = Listed as Threatened Species. Defined as any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.
- LT,PDL = Species currently listed Threatened but has been proposed for delisting.
- LT,PE = Species currently listed Threatened but has been proposed for a change to Endangered.

Florida Natural Areas Inventory

Managed Area Element Summary

Okaloacoochee Slough State Forest

- LE,PT = Species currently listed Endangered but has been proposed for a change to Threatened.
PT = Proposed for listing as Threatened Species.
C = Candidate Species for addition to the list of Endangered and Threatened Wildlife and Plants, Category 1. Federal agencies have sufficient information on biological vulnerability and threats to support proposing to list the species as Endangered or Threatened.
SAT = Threatened due to similarity of appearance to a threatened species.
SC = Species of concern. Species is not currently listed but is of management concern to USFWS.
N = Not currently listed, nor currently being considered for addition to the List of Endangered and Threatened Wildlife and Plants.

STATE LEGAL STATUS

Provided by FNAI for information only. For official definitions and lists of protected species, consult the relevant state agency.

ANIMALS: Definitions derived from "Florida's Endangered Species and Species of Special Concern, Official Lists" published by the Florida Fish and Wildlife Conservation Commission (FFWCC), 1 Aug 1997, and subsequent updates.

- FE = Listed as Endangered Species at the Federal level by the U. S. Fish and Wildlife Service
FT = Listed as Threatened Species at the Federal level by the U. S. Fish and Wildlife Service
F(XN) = Federal listed as an experimental population in Florida
FT(S/A) = Federal Threatened due to similarity of appearance
ST = Listed as Threatened Species by the FFWCC. Defined as a species, subspecies, or isolated population which is acutely vulnerable to environmental alteration, declining in number at a rapid rate, or whose range or habitat is decreasing in area at a rapid rate and as a consequence is destined or very likely to become an endangered species within the foreseeable future. ST* for *Ursus americanus floridanus* (Florida black bear) indicates that this status does not apply in Baker and Columbia counties and in the Apalachicola National Forest. ST* for *Neovison vison* pop.1 (Southern mink, South Florida population) indicates that this status applies to the Everglades population only.
SSC = Listed as Species of Special Concern by the FFWCC. Defined as a population which warrants special protection, recognition, or consideration because it has an inherent significant vulnerability to habitat modification, environmental alteration, human disturbance, or substantial human exploitation which, in the foreseeable future, may result in its becoming a threatened species. SSC* indicates that a species has SSC status only in selected portions of its range in Florida. SSC* for *Pandion haliaetus* (Osprey) indicates that this status applies in Monroe county only.
N = Not currently listed, nor currently being considered for listing.

PLANTS (Florida Department of Agriculture and Consumer Services- FDACS) Definitions derived from Sections 581.011 and 581.185(2), Florida Statutes, and the Preservation of Native Flora of Florida Act, 5B-40.001. FNAI does not track all state-regulated plant species; for a complete list of state-regulated plant species, call Florida Division of Plant Industry, 352-372-3505 or see: <http://doacs.state.fl.us/pi/images/rule05b.pdf>

- LE = Listed as Endangered Plants in the Preservation of Native Flora of Florida Act. Defined as species of plants native to the state that are in imminent danger of extinction within the state, the survival of which is unlikely if the causes of a decline in the number of plants continue, and includes all species determined to be endangered or threatened pursuant to the Federal Endangered Species Act of 1973, as amended.
PE = Proposed by the FDACS for listing as Endangered Plants.
LT = Listed as Threatened Plants in the Preservation of Native Flora of Florida Act. Defined as species native to the state that are in rapid decline in the number of plants within the state, but which have not so decreased in such number as to cause them to be endangered. LT* indicates that a species has LT status only in selected portions of its range in Florida.
PT = Proposed by the FDACS for listing as Threatened Plants.
N = Not currently listed, nor currently being considered for listing.
