Dear Mr. Triplett & Mr. Holdren

A recent nematode sampling of your nursery described below has been processed and found to be negative for burrowing, reniform and guava root-knot nematodes.

**Block - 5856 consisting of 4.0 acres located at 12340 State Road 62, Parrish
(MANATEE COUNTY)**

Your plant material on attached certification list, and grown at the locations described above, meet the **(TYPE II)** nematode certification requirements of **Arizona, Louisiana, and Texas**. The state of Arizona **requires a State Phytosanitary Certificate** to accompany your materials. If you have not discussed this subject with your State agriculture inspector, then please do so before shipping.

This is official notice that **0070** is your permanent nematode certification number.

To remain approved, all plants, plant parts (except seed), soil, sawdust, mulch, manure, or peat used in this area of your nursery must be burrowing, reniform and guava root-knot nematode certified and accompanied by a certificate.

Nurserymen are reminded that the nematode certification covering the plant material on attached certification list shall remain in effect for a period of 1 year (12 months) and expires **September 23, 2022**, unless revoked for cause.

Your official nematode certification list, can be found on our department website through the following link: www.fdacs.gov/NematodeCertification

If you have questions regarding your certification please contact your local inspector, Tracy Howard at (941) 981-6101, or email: tracy.howard@fdacs.gov.

Sincerely,

Jason D. Stanley
